## raster: Geographic Data Analysis and Modeling

Reading, writing, manipulating, analyzing and modeling of gridded spatial data. The package implements basic and high-level functions. Processing of very large files is supported.

Version: 2.6-7

Depends: methods, [sp](#) ( $\geq 1.2-0$ ), [R](#) ( $\geq 3.0.0$ )

Imports: rasterVis: Visualization Methods for Raster Data

LinkingTo: Methods for enhanced visualization and interaction with raster data. It implements visualization methods for quantitative data and categorical data, both for univariate and multivariate rasters. It also provides methods to display spatiotemporal rasters, and vector fields. See the website for examples.

Author:

Version: 0.45

Depends: [R](#) ( $\geq 2.14.0$ ), methods, [raster](#) ( $\geq 2.0-12$ ), [lattice](#), [latticeExtra](#)

Imports: stats, utils, parallel, grid, grDevices, [RColorBrewer](#), [hexbin](#), [sp](#) ( $\geq 1.0-6$ ), [zoo](#), [viridisLite](#)

Suggests: [rgl](#), [ggplot2](#), [colorspace](#), [dichromat](#)

Replying to @mdsumner

Looks cool! I'm not sure how to do it with grid graphics on R, but I could look into it.
